

CS 2024 – ASSIGNMENT #1

Assigned: 8/29/2019

Due: 9/4/2019

PROBLEM:

Today in lecture we discussed the compilers you can use for the course as well as the Computer Science department's CMS system. We also went over the "standard" "Hello World" program and showed how to compile it on all three supported platforms (Xcode on MacOS, Visual Studio on Windows and Command Line for Unix/Linux/MacOS).

Historically, students enrolled in CS2024 span many colleges with (at times) less than HALF of the class being engineering majors. As such, we'd like to know why you are taking this course!

Your assignment is to modify the standard "Hello World" world to print out two things each on a separate line: (1) The name of the compiler you have chosen to use for this course and (2) one reason why you are taking this course. So instead of the output being:

```
Hello World!
```

It should print something like this:

```
I will be using Xcode for this course  
Because I hope to get a job as a C++ Programmer
```

Of course, you will have it output a reason why YOU are taking the course.

HINTS/DISCUSSION:

Depending on how long your "reason" is, you may have to break the text of your reason into multiple lines. There are multiple ways to do this. Feel free to do some research on this if you need to OR just shorten your reason to fit in one line! The main goal of the assignment is to get you familiar with your compiler and the submission system.

FILES TO SUBMIT:

1. main.cpp

NOTE: *There is NO writeup required for this assignment!*
